Add tag:
User can add tag and view existing ones. Tags saved if not already in tag list.

Add to collection:
User can add to personal/shared collection and view existing collection assignments.

View item:
User can select a row in the grid and view the entire record entry for that row.

Validation:
If the user is in validation mode, the user can verify that all patient files were moved over by comparing counts, and verify chain-of-custody by comparing the values of 10-20 key fields selected from various parts of the patient's combined file. The user can also validate other parts of the patient's combined file by downloading the raw XML.
